

Aqualyze Waterway

Why choose Waterway...

- ★ For a high-flow, high-capacity hidden system
- ★ If you don't want to change your tap

Benefit from having filtered water in your kitchen, a system capable of high capacities, without the need for a new or separate tap. Achieve water which has improved taste and is cleaner for drinking, is healthier for cooking and more convenient than jug filters or bottled water... choose the Aqualyze Waterway, from the range of under-sink water filtration systems.

This high capacity drinking water system is plumbed-in directly under your sink onto the kitchen cold water supply, thus ensuring all cold water required from the tap is forced through the filter system before being dispensed, resulting in cleaner, healthier and great-tasting water... whatever its purpose.

This system will require installation from a competent DIY person or professional plumber, and on-going cartridge changes, which can be carried out by either a plumber or the homeowner. DIY change outs will benefit from particularly economical running costs, as unlike other systems only the internal components are changed.

The Waterway processes water through millions of square feet of high efficiency, powder activated carbon, absorbing contamination and filtering to an incredibly fine 1 micron enabling the removal of debris and cysts.

Because water quality varies around the country, Aqualyze Waterway has a choice of 2 system options:- one for soft water areas, and another for hard water areas. Both systems remove sediment, cysts, bad taste, odour and chlorine however the option for hard water areas has additional built-in scale control.

Technical information

Installation

Due to this system requiring direct in-line connection to the kitchen cold water pipe, it is strongly recommended that the installation of the Aqualyze Waterway system is carried out by a professional plumber. In order to connect the system, shutting-off the water supply will be required as pipe work will need to be cut. On-going cartridge replacement is a simple 15 minute task for the home-owner.

Filter Cartridge

The filter cartridge in this system requires replacing at regular intervals (see chart below for details). Please follow the instructions given on how to maintain your system and replace exhausted cartridges.

Cartridge Capacity/Life:

AWF1 - 100,000 litres or 1 year
AWF2 - 10,000 litres or 6 months

Flow:

AWF1 - 3.8 litres/minute
AWF2 - 3.8 litres/minute

Water Pressure:

Minimum - 20 psi (1.4 bar)
Maximum - 125 psi (8.6 bar)

Temperature:

40° F - 180°F (4.4° C - 82.2° C)

Aqualyze Distributor:

System components

- 1 x Aqualyze Waterway white slimline housing with integral bracket
- 2 x Fixing screws for housing
- 1 x Aqualyze Waterway filter cartridge
- 2 x 1/2" x 15mm push-fits
- 2 x Lengths of tubing
- 1 x Housing spanner
