# UF-ULTRA FILTRATION PALAS ULTRA

A single tank technology

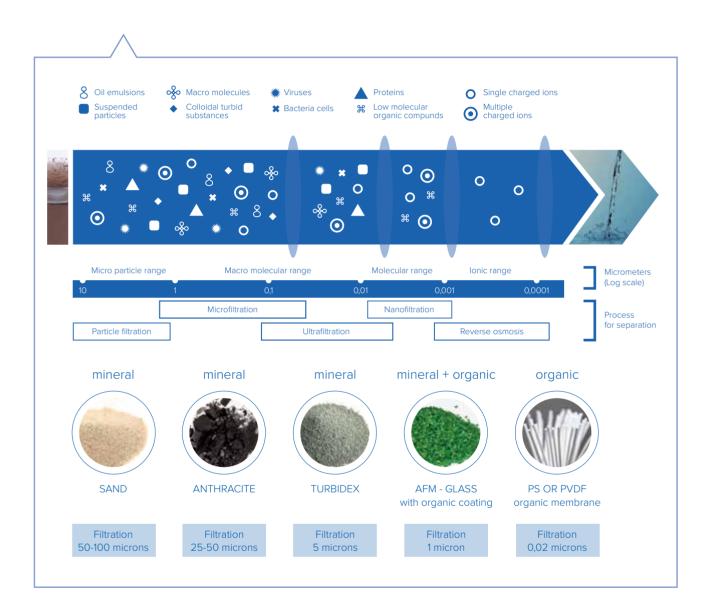

## "

An advanced step in the filtration spectrum.

### PALLAS ULTRA

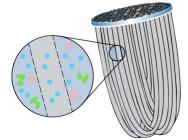

#### THE FILTRATION PROCESS

In an effort to offer our customers the best available filtration solutions we have gathered the best available methods from mineral base through organic coated on mineral and finally complete organic fibres. The illustration below explains the filter methods used in the ultrafiltration process.

#### PALLAS ULTRA USES HOLLOW FIBER

Hollow fibre acts a physical barrier to remove bacteria. Its your complementary solution to UV and chlorine disinfection. Hollow fibre technology is made up of small hollow fibres 1mm in diameter with 0.02mm pores. The filtration is from the outside in minimizing the risk of deep clogging. Simple flushing with water and/or air together with a large membrane area allows a compact design.

#### PALLAS ULTRA, SINGLE TANK TECHNOLOGY

Palls Ultra integrates technology in one tank. Its an easy and effective treatment for residential and light commercial applications. The Pallas Ultra comes with an Evolve or an Impression valve.

**Evolve** has a reliable trouble-free design. The smart controller ensures a smooth operation.

**Impression** has an easy-to-read LED screen and the user-friendly console allows you to monitor all operating functions.

PALLAS ULTRA: Designed to be used with many water types

#### PALLAS ULTRA: HOW DOES IT WORK?

Thin

#### SAFETY

The UF membrane used in the Pallas Ultra is laboratory certified for use on large municipal works in the US and Europe. It guarantees the efficient treatment for your Point of Use application

• EPA. French ACS and CDHS certified

#### WHY PALLAS ULTRA?

- Efficient treatment: ultrafiltration clarifies the water from contaminants.
- Healthy: Disolved minaerals useful for the body are still in the water
- Versatile: useful for many water resources
- Single tank technology: bundled technology in 1 tank
- Easy to use: low maintenance, easy installation
- Well-known components

#### **APPLICATIONS FOR ULTRA FILTRATION**

HEALTHCARE CENTERS & DENTIST OFFICES To avoid high risk of infection from waterborn pathogens

**RESTAURANT & HOTEL** Where legionella prevention is a must

WHOLE HOUSE PROTECTION To have extra high level of protection for city water or private well water supply

m⊞

POOL To ensure perfect safety for swimmers
